DIGITAL LITERACY PROJECT REPORT

Name: Tanmay VM

Registration Number: 25BAI10377

Branch: CSE – AI & ML

Year: 2025-2029

Course Code: CSE0001 Date: 27th March 2026

1. Introduction

Digital literacy is the ability to navigate, evaluate, and use digital information responsibly, ethically, and effectively. In a technology-driven academic and professional environment, these skills are crucial for learning, collaboration, and personal safety. This project provides hands-on experience across five modules, including creating digital awareness resources, building a portfolio, exploring coding and collaboration platforms, practicing professional communication, and understanding cybercrime. The project emphasizes practical application by integrating online tools such as Canva, GitHub, Google Workspace, and HackerRank, while promoting safe and professional online habits. By completing all tasks, students gain both theoretical knowledge and applied skills that enhance their preparedness for digital challenges.

2. Task 1: Digital Literacy Awareness Infographic For Task 1,

I created a one-page infographic using Canva. The infographic highlights three main aspects of digital literacy: its definition, useful digital tools for students, and safe internet practices. I included visual elements such as icons, color coding, and concise text to make the content clear and engaging for my batchmates. The infographic was exported as a PNG and uploaded to the repository folder:

One interesting challenge was condensing complex concepts into a single page while keeping it visually appealing and informative. This task enhanced my ability to communicate abstract ideas visually and

made me reflect on my own online habits, such as time management and safe browsing practices. Creating this infographic reinforced the importance of combining creativity with knowledge for effective learning resources

3. Task 2: Build Your Student Digital Portfolio

In Task 2, I built my foundational digital presence using GitHub, LinkedIn, and Kaggle. On GitHub, I created a profile README (repository named after my username) including my name, branch, year, and learning goals. The repository folder is available here:

https://github.com/tanmay25bai10377-sys/digital-literacy-project/tree/main/task-2-por **On LinkedIn, I filled in the Education section with my degree, institution, and expected graduation year. Kaggle was used to explore datasets and participate in beginner-level competitions. Each platform serves a distinct purpose: GitHub for sharing code and collaborating on projects, LinkedIn for networking and professional visibility, and Kaggle for practising data science skills. Over the next four years, I plan to regularly update these profiles with new projects, certifications, and achievements, creating a professional digital footprint that supports academic and career opportunities. This task highlighted the importance of maintaining a clean, professional online presence from the start.**

4. Task 3: Explore Coding & Collaboration Platforms

For Task 3, I explored coding and collaboration platforms. I created an account on HackerRank and completed the beginner-level “Solve Me First” challenge, earning a skill badge. For collaboration, I built a Google Form(https://docs.google.com/forms/d/e/1FAIpQLSdREvzhepAKpPYKQKqzyjY0VKNOUp4ylpz56aFsyk90OMcU7w/viewfor m?usp=publish-editor)with five questions on digital literacy awareness and linked it to a Google Sheet to collect responses. Screenshots of the challenge, form, and sheet are available in

This hands-on experience improved my coding confidence and familiarity with cloud-based

collaboration tools. The platforms are academically beneficial, enabling efficient problem-solving, teamwork, and data collection. Additionally, the Google Form could be used in real-time to quiz peers, demonstrating the practical application of these tools in educational settings. The task reinforced my understanding of integrating coding practice and collaborative learning to enhance overall productivity

5. Task 4: Draft a Professional Email & Etiquette Guide
In Task 4, I drafted two professional emails: 1. Requesting an extension from a professor. 2. Expressing interest in a summer internship to a coordinator. Both emails follow professional standards, including clear subject lines, greetings, structured bodies, and proper sign-offs. I also created a Social Media Do's and Don'ts checklist with five guidelines and five warnings for responsible social media use. Both the email drafts and the checklist are stored in

A real-world scenario I reflected on involved a student who miscommunicated deadlines due to unclear email structure, resulting in a missed submission. Proper formatting, concise language, and timely follow-ups could have avoided this. Completing this task reinforced the importance of professional digital communication and proactive online conduct

6. Task 5: Cybercrime Awareness Case Study & Prevention Guide For Task 5, I researched phishing attacks, describing a realistic scenario where fraudulent emails mimic trusted sources to steal sensitive information. Targets often include students and employees, with consequences ranging from financial loss to identity theft. The case study is available in \

Additionally, I created a “Stay Safe Online” checklist with eight actionable tips for college students in India, including financial safety measures and reporting channels like National Cyber Crime Portal and helpline 1930. I was surprised by how easily attackers can exploit minor mistakes and how preventive habits, such as verifying links and using strong passwords, can make a huge difference. Personally, I will adopt the

habit of carefully checking all links before clicking, especially for financial transaction

7. Conclusion The Digital Literacy Project enhanced my understanding of responsible digital practices, professional communication, coding skills, and cybersecurity awareness. Creating infographics, portfolios, and awareness resources strengthened both practical skills and reflective learning. The integration of tools like Canva, GitHub, HackerRank, Google Workspace, and LinkedIn demonstrated the importance of technology in academic and professional growth. Overall, this project has prepared me to navigate digital environments responsibly, communicate effectively online, and maintain a professional digital presence throughout my career
